

PACKLINE®

INNOVATIVE AND TEST
WINNING ROOF BOXES

NEW! NX series

Packline has produced premium roof boxes with outstanding design for decades. Years of ongoing product development and testing has resulted in a new generation of roof boxes. The Packline NX series is an innovative and award winning roof box series with aerodynamic and elegant design, seamless closing and great storage capacity.

The new Packline NX series is a popular choice. It has received several awards and nominations since it was first released. The customers truly appreciate a state of the art roof box that matches the sophisticated lines of premium cars. A combination of innovative Twin Sheet technology with an elegant, aerodynamic design makes the Packline NX roof boxes appear as an integrated part of the car. Not only highly appreciated by customers - the NX 215 is also a winner of tests and has received numerous awards!

It was nominated for the «Innovation Award» in Automechanica 2016, the worlds biggest trade fair for the automobile aftermarket. NX 215 became the winner of an extensive test of roof boxes in one of Swedens largest automobile magazines, «Vi Bilägare», in July 2016. Packline NX 215 was also given recognition for its superior quality when it received the GKV/TecPart Innovation Prize in October 2016, during the K-Messe in Düsseldorf. We truly appreciate the reception the new Packline NX roof boxes has received!

GKV/TecPart Innovation Prize

Packline NX 215 received the GKV/TecPart Innovation Prize in October 2016, during the K-Messe in Düsseldorf. It was given recognition for its high level of innovation and superior quality.

Test Winner

NX 215 became test winner of an extensive test of roof boxes in one of Swedens largest automobile magazines, «Vi Bilägare», in July 2016. The roof box was applauded for its design, functions, versatility and was undoubtedly the test winner with only positive remarks.

Innovation Award nominated

Packline NX 215 was nominated for the «Innovation Award» in Automechanica 2016, the worlds biggest trade fair for the automobile aftermarket.

PERFECT
COMBINATION
OF VOLUME AND
DESIGN

INNOVATIVE TECHNOLOGY MEETS AERODYNAMIC DESIGN

The Packline NX series consists of three different roof boxes; Packline NX 195, Packline NX 215 and Packline NX Premium. The Packline NX 195 and 215 are the first roof boxes in ABS produced with unique Twin Sheet technology. This makes a very solid, yet light construction, which allows a low sitting, elegant and aerodynamic design. Packline also produces the NX Premium, an exclusive fiberglass box with a two fold bottom and side walls. The NX Premium is an extremely stable and secure roof box that fits low on the car. Every roof box in the NX series has the same seamless closing, Packline's innovative «Safe Nose» solution, great storage capacity and the elegant, aerodynamic design which is extremely low-sitting. All Packline roof boxes are City Crash tested according to standard DIN 75302.

NX 215 - THE SCANDINAVIAN VERSION FOR AN ACTIVE LIFESTYLE

The NX 215 is one of the world's first roof boxes that is manufactured in ABS plastic with Twin Sheet technology. The double layer of ABS plastic ensures stability, while the roof box still is very lightweight. Unique features like the new locking system and a push-button opening simplify the handling. The NX 215 is equipped with Packline's unique Lift-Off system, which enables you to load and unload from three sides simultaneously.

NX 195 - PERFECT FIT

The NX 195 is one of the World's first roof boxes that is manufactured in ABS plastic with Twin Sheet technology. The double layer of ABS plastic ensures stability, while the roof box still is very lightweight. Unique features like the new locking system and a push-button opening simplify the handling. The NX 195 is equipped with Packline's unique Lift-Off system, which enables you to load and unload from three sides simultaneously.

NX PREMIUM - EXCLUSIVE FIBERGLASS ROOF BOX

NX Premium is the most exclusive roof box Packline has ever developed and produced, and sets new standards in design and aerodynamics. The slim and curved design blends in elegantly with the car's shapes and lines. Its two fold bottom and side walls ensure the highest stability and strength.
